SUMMARY

Backend Software Engineer with **3+ years** building production APIs, event-driven integrations, and distributed systems. Delivered infrastructure across **300+ integrations**, cut p95 latency **29% (185 ms → 132 ms)**, and built evaluation-driven Python/FastAPI RAG systems improving grounded responses from **79% to 92%**.

TECHNICAL SKILLS

Languages: Python, C#, TypeScript/JavaScript, SQL

Backend & Distributed Systems: FastAPI, .NET/ASP.NET Core, REST APIs, Microservices, Kafka, Redis, Event-Driven Systems, Async Processing

Data & Cloud: PostgreSQL, AWS, Docker, Kubernetes, CI/CD, GitHub Actions

Frontend, Testing & Observability: React, OpenTelemetry, Prometheus/PromQL, Chronosphere, Postman, Playwright

AI Engineering: LLMs, RAG, pgvector, Structured Outputs, LLM Evaluation, Guardrails, Human-in-the-Loop

EXPERIENCE

Software Engineer | Rakt mParticle

Sep 2025 – Aug 2026 | USA

Enterprise customer-data platform processing billions of events per month across 300+ integrations

- Owned end-to-end development of Customer 360 / IDSync identity-debugging workflows that traced how customer, email, and device identifiers were resolved, linked, and merged across user profiles; built C#/.NET APIs and React/TypeScript search experiences over indexed history, cutting typical investigations from **~45 to ~20 minutes**.
- Engineered event-driven real-time audience membership and activation services evaluating streaming profile attributes and behavioral events across **~2M** membership decisions per day, cutting audience refresh-to-activation latency from **~15 minutes to under 5 minutes**.
- Built reusable consent-policy enforcement across **300+** partner integrations, centralizing GDPR/CCPA and eligibility checks in the audience-output pipeline and cutting per-integration privacy configuration from **~2 days to under 4 hours**.
- Reduced p95 API latency **29% (185 ms → 132 ms)** across high-traffic backend paths using Redis caching and asynchronous parallel retrieval while maintaining **99.9%+** availability.
- Instrumented distributed services with OpenTelemetry, Prometheus/PromQL, and Chronosphere, cutting **MTTD from ~20 to ~8 minutes** and **MTTR from ~60 to ~25 minutes**.

Research Engineer | University of Central Florida

Jun 2025 – Sep 2025 | USA

LLM-Assisted Graph Analytics & Research Systems

- Built a Python/FastAPI RAG research platform around **AlphaCore** and **NetworkX** development, retrieving across research papers, documentation, source code, and experimental artifacts with PostgreSQL/pgvector; cut typical research and implementation lookups from **~20 minutes to under 5 minutes**.
- Developed a **300+ query** evaluation benchmark spanning research-paper comprehension, graph-algorithm reasoning, and implementation questions; tuned retrieval, chunking, and prompting to improve grounded responses from **79% to 92%**.
- Engineered structured-output reliability for LLM-assisted research workflows with schema validation, retries, guardrails, and human review, achieving **98%+** schema-valid responses and reducing manual corrections by **35%**.

Software Engineer | Infosys

Jun 2021 – Jul 2023 | India

Banking Platform - Customer Onboarding & Transaction Processing

- Built C#/.NET backend services and REST APIs for customer onboarding and transaction-processing workflows, implementing validation, business rules, and SQL-backed persistence while supporting **5,000+ transactions per day**.
- Engineered Kafka-based synchronization across **5 core** and downstream systems using idempotent consumers, retry policies, and dead-letter queues, cutting weekly reconciliation incidents from **~25 to 6** while preventing duplicate transaction processing.

Healthcare Payer Platform - Member Enrollment & Unified Member Data

- Built member enrollment and unified member-profile workflows using C#/.NET, React, REST APIs, and SQL across healthcare payer systems, optimizing queries and indexes to improve API response times by **25%**.
- Expanded automated unit, integration, API, and end-to-end testing across enrollment and member-management workflows, reducing regression defects by **18%** and shortening production validation from **~2 days to under 1 day**.

EDUCATION

Master of Science in Computer Science | University of Central Florida | GPA: 3.9

Aug 2023 – May 2025

Bachelor of Engineering in Computer Science | Pune University

Aug 2016 – May 2020
